

## MODEL PERFORMANCE ANALYTICS

This template is designed to check your Revit model against common industry best practices. As with any best practices, these are based on industry trends and can be modified to fit specific project requirements or firm standards.

This template is built from the revit 2019 API. While it is usable with older versions of Revit, not all of the metrics will be available.

To use this template you will need to download the BIM Interoperability Tools either from the website ([link](#)) or via the Autodesk Desktop app. Once installed, open Revit, choose the BIM Interoperability Tools tab. Select Setup from the Model Checker panel (1). This will open a dialog box for you to load your check configuration.

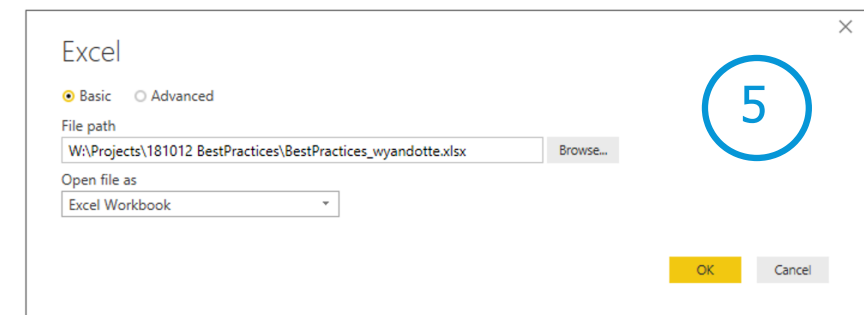

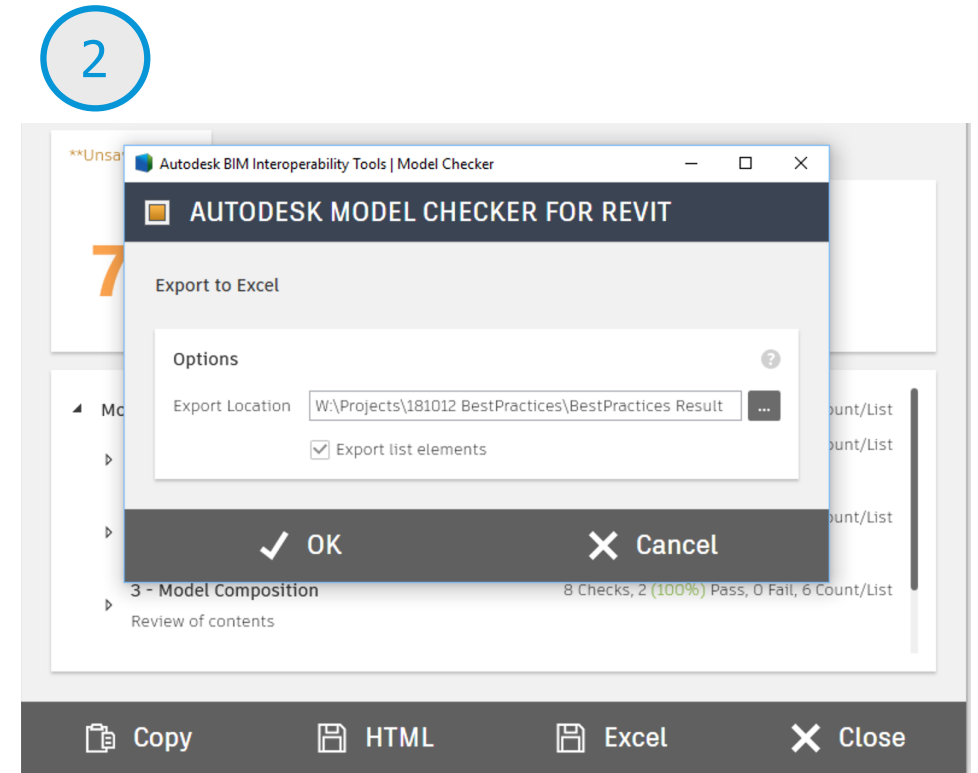

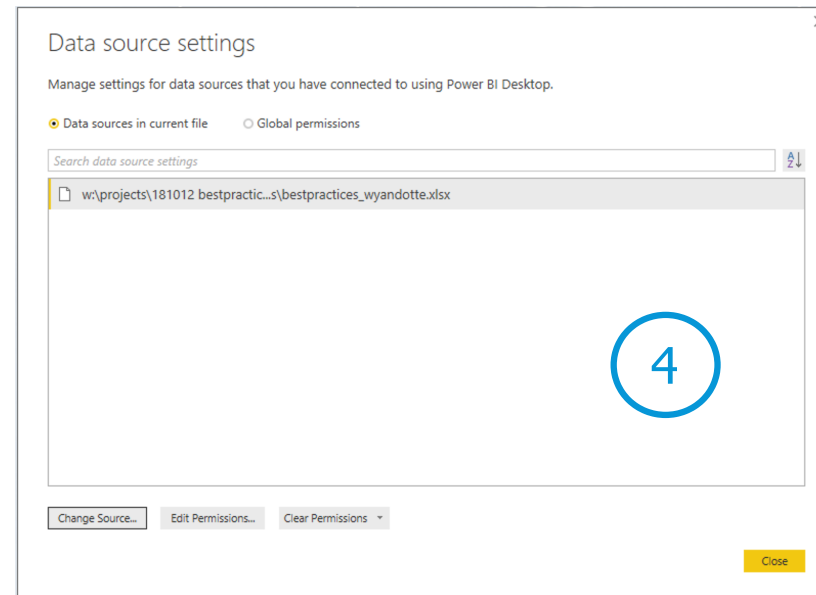

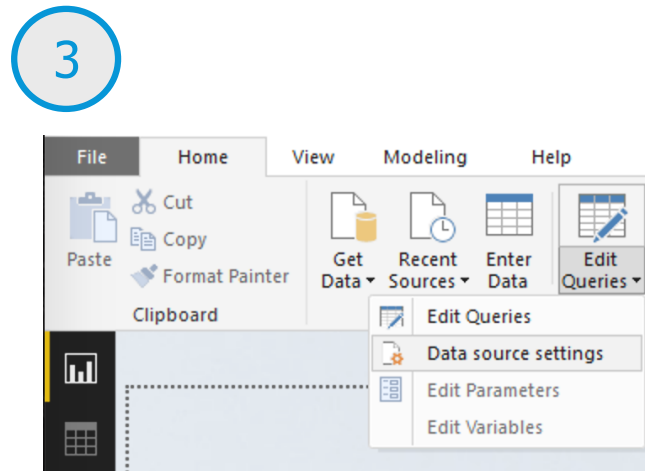

Download the config and this dashboard here ([link](#)).

Once the check has run, you'll have the option to export the check to an excel file (2). Make sure to check the Export list elements check box before exporting.

Once you have the excel file, you're ready to review the report. Open Power BI (download BI [here](#)). Once you have Power BI running, open the dashboard. Finally, we just need to populate it with your project data. To do that, choose the Home tab and the Edit Queries fly out. Select the Data Source Settings button (3).

In the Data Source Settings, choose Change Source at bottom left of the dialog box (4), which will open a new window. Here, you can browse out to the excel file you saved from BIM Interoperability Tools (5). Click OK to close the dialog boxes. Your data will automatically load and you can Publish the dashboard to share it with others.

Revit's published best practices can be found here ([link](#))

## MODEL PERFORMANCE BASICS

MODEL PERFORMANCE IS PRIMARILY IMPACTED BY FOLLOWING INDUSTRY BEST PRACTICES FOR REVIT MODEL CREATION. A LARGE, WELL CONSTRUCTED MODEL CAN OUT PERFORM A SMALL MODEL THAT WASN'T WELL BUILT.

THE BEST PRACTICES THAT MOST IMPACT MODEL PERFORMANCE (OUTSIDE OF PHYSICAL HARDWARE) SHOWN TO THE LEFT. MINIMIZING THESE VALUES CAN DRAMATICALLY IMPACT PERFORMANCE.

SELECT THE INFORMATION ICON FOR ADDITIONAL INFORMATION.

ERRORS & WARNINGS

COUNT	ERROR / WARNING
943	Two elements were not automatically joined because one or both is not editable.
62	Room is not in a properly enclosed region
23	A wall and a room separation line overlap. One of them may be ignored when Revit finds room boundaries. Shorten or delete the room separation line to remove the overlap.
21	Elements have duplicate "Number" values.
13	Highlighted walls overlap. One of them may be ignored when Revit finds room boundaries. Use Cut Geometry to embed one wall within the other.
11	Highlighted lines overlap. Lines may not form closed loops.
10	Line in Sketch is slightly off axis and may cause inaccuracies.
8	Highlighted walls are attached to, but miss, the highlighted targets.
7	There are identical instances in the same place. This will result in double counting in schedules.
5	Insert conflicts with joined Wall.
4	Actual Number of Risers is different from Desired Number of Risers. Add/remove Risers or change Desired Number of Risers in Stairs Properties.
4	Area separation line is slightly off axis and may cause inaccuracies.
4	Highlighted elements are joined but do not intersect.
2	Highlighted room separation lines overlap. One of them may be ignored when Revit finds room boundaries. Delete one of the lines.
